

# GeoCyclone India - Cyclone Assessment Report

## Event Study: Odisha Super Cyclone (1999)

| Parameter            | Value         | Parameter               | Value         |
|----------------------|---------------|-------------------------|---------------|
| Cyclone Category     | Super Cyclone | Peak Wind Speed         | 140.0 knots   |
| Min Central Pressure | 912.0 hPa     | Landfall Location/State | Odisha        |
| Duration             | 96.0 hours    | Basin                   | Bay of Bengal |

### Meteorological Trends (Pressure & Wind)

### Estimated Damage & Economic Loss Assessment

| Total Economic Loss | Crop Damage   | Infrastructure Loss | Exposed Assets        |
|---------------------|---------------|---------------------|-----------------------|
| \$3121.52M USD      | \$202.78M USD | \$35.71M USD        | 45 units (31 damaged) |

## District-wise Exposure Breakdown

| District      | State  | Risk Class | Houses Damaged | Crops Damaged (Ha) | Loss (\$M USD) |
|---------------|--------|------------|----------------|--------------------|----------------|
| Jagatsinghpur | Odisha | Very High  | 162,586        | 36,383.1           | \$877.7M       |
| Puri          | Odisha | High       | 44,846         | 11,211.6           | \$247.35M      |
| Balasore      | Odisha | Moderate   | 30,630         | 8,353.9            | \$168.35M      |
| Bhadrak       | Odisha | High       | 132,573        | 33,143.5           | \$718.89M      |
| Kendrapara    | Odisha | Very High  | 205,971        | 46,091.6           | \$1109.23M     |
